

Student Fee Management System

- Developer: Michael Ukana
Course / Submission Info

Problem Statement

- Challenges in manual fee tracking
- Errors in calculations
- Lack of automated reminders

Proposed Solution

- CLI-based automated system
- CSV-based data storage
- Email notifications
- Receipt generation

System Architecture

- User Input (CLI)
- Processing Layer (Python logic)
- Storage Layer (CSV files)
- Output Layer (Receipts + Emails)

Core Features

- Add student
- Record payment
- Calculate balance
- Send reminders
- Generate receipts

Data Handling

- Use of CSV files
- Structure of student and payment data
- Balance computation method

Output Results

- CLI outputs
- Receipt files
- Email notifications

Conclusion

- Automation improves efficiency
- Reduces human error
- Scalable and extendable system
